

5 Reasons A Universal Phone Charger Is...

[Fourthrail](#) 708 posts since

Mar 30, 2007

Leading electronic device makers including Samsung and Motorola Monday agreed to start manufacturing agnostic chargers for mobile devices in Europe which are expected to hit that market in 2010. Read the full blog entry at Channelweb via <http://www.crn.com/hardware/218101973>.

How ridiculous is having exclusive chargers. Imagine if you had to buy a special plug for every TV in your home?

More standardization for laptops/netbooks' power would be nice too.

I hear that. At this point, the number of extra batteries, chargers, what have you needs a separate bag to travel with. Anything that consolidates even a few of those is on my shopping list. Anyone else?

Cell phone companies don't make their profits on cell phones but the accessories, i.e. car chargers and whatnot. If they made a universal charger, define universal and for how long?

I mean PCs for the most part have had universal power cords for decades, but laptops change their's every model and/or year line.
