Thx for the story, awesome app... simple, saves time and it works every time... was able to link my moto Q to my laptop and machine automatically locks/unlocks when the phone gets w/in or out range, requires no key pressing... fine-tuning feature is killer...

Finally, something more sophisticated than fingers on a keyboard multiple times a day to access my PC. It's crazy that you can't leave your cube anymore without worry about somebody jumping on your PC and missing you up. I can't wait to get this and start using it.

blawler01 - Glad to hear the application is working well for you.... we're really looking forward to testing it out in the lab and comparing it to similar programs.

RichTech - I agree 100%... as usual, the best solutions are usually the simplest. Note though, that the program requires your computer to have Bluetooth so, unless you're using a docked laptop in your cube, it probably won't work.
